

Trophy Rack Fall/Winter Deer Mix

Rye Grain

- Rye thrives on well-drained loamy soils but it's tolerant of both heavy clays and droughty, sandy soils.
- It grows best with ample moisture, but excessive rainfall can suppresses subsequent vegetative growth and flooding can kill it.
- Rye can grow in low-fertility soils where other cereal grains may fail.

Winter Peas

- Winter peas are a low-growing, viny legume.
- It has hollow, slender and succulent stems, 2 to 4 feet long.
- The foliage is pale green, and the flowers are colored, usually purple, pink or reddish.
- The leaf consists of one to three pairs of leaflets and terminal branched tendrils.
- Pods are 1.5 to 2.5 inches long with three to five round, dark-colored seeds. Seed color is commonly gray with purple or brown mottles.

Winter Oats

- Winter oats generally grow to nearly 2m tall, with a stout, hollow stem with conspicuous nodes.
- The leaves are flat, narrow, and veined. They often taper to a fine point and are rolled in a bud.
- The seedhead is a large pendulous spikelet, 1.5 – 3 cm in length, usually consists of 2-3 florets.

Buckwheat

- Buckwheat plants grow quickly, beginning to produce seed in about 6 weeks and ripening at 10 to 11 weeks. They grow 30 to 50 inches (75 to 125 cm) tall.

**White Clover**

- It is a herbaceous, perennial plant. It is low growing, with heads of whitish flowers, often with a tinge of pink or cream that may come on with the aging of the plant.
- The heads are generally 1.5–2 centimeters (0.6–0.8 in) wide, and are at the end of 7-cm (2.8-in) peduncles or flower stalks.
- The leaves, which by themselves form the symbol known as shamrock, are trifoliolate, smooth, elliptic to egg-shaped and long-petioled.
- The stems function as stolons, so white clover often forms mats, with the stems creeping as much as 18 cm (7.1 in) a year, and rooting at the nodes.

**Turnip**

- The most common type of turnip is mostly white-skinned apart from the upper 1–6 centimeters, which protrude above the ground and are purple, red, or greenish wherever sunlight has fallen.
- This above-ground part develops from stem tissue, but is fused with the root.
- The interior flesh is entirely white. The entire root is roughly conical, but can be occasionally global, about 5–20 centimeters in diameter, and lacks side roots.

Rape Seed

- A low growing, dense, broadleaf plant.
